Experimental conditions reported by various authors to
be required for obtaining the highest yields of un-
saturated hydrocarbons, especially acetylene, in
cracking of methane in mixture with ethane are tabu-
lated. A discussion of these data leads the authors to
the conclusion that the cracking of methane is induced

Correlation of data on cracking of methane obtained by
the authors and reported by other workers in the field
revealed the pronounced acceleration of the process
when the total and partial pressures of methane are re-
